OVERVIEW

Bracture LLC helps small teams put AI tools to work on everyday tasks. For prime contractors, it takes bounded tasks on funded contracts, such as data quality reviews, requirements and document preparation. Bracture manages AI tools the way a database administrator manages a production database, with controlled access, recorded changes and results checked against the source.

CORE COMPETENCIES

Advisory and planning

- Map how a process runs today and decide which steps an AI tool handles and which a person checks.
- Write requirements and acceptance criteria before work starts.
- Lay out options that fit the client's compliance needs and budget, each with a cost estimate.

Preparing data for AI tools

- Clean and organize the data an AI tool needs, traceable to its source.
- Classify sensitive data and keep it from tools that should not see it.

AI tool setup and integration

- Set up Claude, ChatGPT and agent workflows in the client's own accounts.
- Connect AI tools to existing data through read-only Model Context Protocol (MCP) servers.

Access control and oversight

- Give each person, and each AI tool acting for them, only the access the task needs.
- Require human approval before high-risk actions, with logs and recovery steps.

Training and handoff

- Train staff on their own tasks and hand off written steps they can run.

DIFFERENTIATORS

- Works inside the client's accounts and logging. Data that must leave gets a written storage location and return date first.
- Acceptance criteria are agreed in writing before work starts.
- Results are checked against the system of record before handoff.
- Based in Hawaii, on site on Oahu or remote on Pacific Time hours.

COMPANY DATA

NAME	Bracture LLC
TYPE	Hawaii limited liability company, established 2025
SIZE	Small business
LOCATION	Kaneohe, Hawaii
UEI	DRR9TDELCC73
CAGE	20UD4
NAICS	541512, Computer Systems Design Services

FOUNDER CREDENTIALS

From Anthropic: Claude Certified Associate, Foundations; Claude Partner Badge, Claude Code

ENGAGEMENT OPTIONS

- A bounded subcontract task for a prime on a funded project.
- A fixed-price plan for one recurring process.
- A working review of an existing data or AI workflow, ending in a checked handoff.
